

Application Note: MiniTerm 9xx as USB HID Keyboard

Describes how to program the MiniTerm 900, 904, or 905 (Version 4.0 or higher) to function as a STANDARD USB HID KEYBOARD.

1. Requires MacroMaster232 to be installed, follow the instructions in the MiniTerm “Quick Start Guide” booklet first and set up as a USB Virtual Serial Device.
2. Run ”MacroMaster232.exe”.
3. Click on the “File Open” button.
4. Select the file named “Default9xxHID.ckd” and load it. (See Diagram below)

5. Click the “Download” button and wait for the MiniTerm 9xx to program and reboot as a standard USB HID KEYBOARD DEVICE.
6. Within MacroMaster, click the “Test” button and test the pinpad.
7. Once programmed, the MiniTerm 9xx will remain a USB HID KEYBOARD device and it can be plugged into any PC without the need to install the Genovation MiniTermPro software.

If you experience any problems, contact Genovation Tech Support for assistance.
