ControlPad CPSxx

Programmable Serial Keypads (RS232 & USB)
Version 1.0

Software Installation- Windows Users **MUST** install the USB drivers **BEFORE** you plug the keypad into the USB port of your PC.

Insert the CD-ROM that was included with the Controlpad CPSxx and run the Set Up program. This will install MacroMasterCPSxx programming software and the USB drivers needed to create a virtual serial COM port for the USB Controlpad CPSxx-U model. Once installed, you may proceed to install your hardware.

Hardware Installation-

Controlpad CPSxx-DB9Serial (RS232 Version) - Plug your keypad into an available RS232 serial port and plug in the included 5vdc regulated A/C power adaptor into the power jack located on the serial connector end of the cable.

Controlpad CPSxx-USBVirtualSerial (USB Version) – For **Apple MAC** and **Linux**, just plug the keypad into a USB port and the operating system will automatically install the USB drivers.

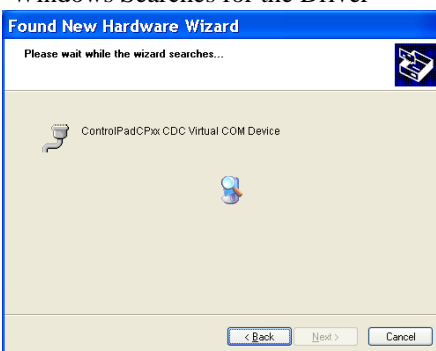

Windows Installations-

You must first run the installation CD which will install the MacroMasterCPSxx software and the necessary USB drivers that are required to create a virtual serial COM port within your compatible Windows operating system. Once the software and driver installation is complete, then **plug the Controlpad CPSxx into an available USB port**. Windows will detect a new USB device and prompt you to select the driver.

Click the Next Button

Windows Searches for the Driver

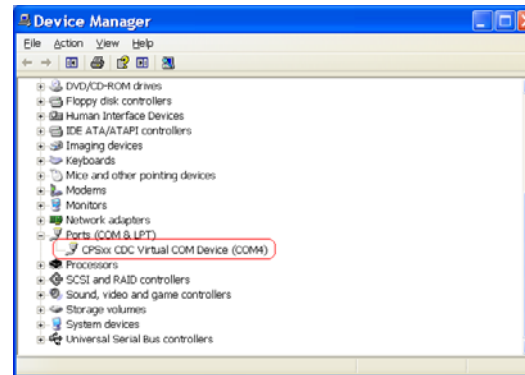

Click "Continue Anyway"

Click "Finish"

The new COM port installed can be viewed in Windows Device Manager

Run the MacroMasterCPSxx Program-

- Click on Start >> Programs >> Genovation >> MacroMasterCPSxx >> MacroMasterCPSxx
- Click on "Set Port" button to locate the Controlpad CPSxx COM Port
- Click on "TEST" button to test the keypad
